

PRESCIENT

DN4 Networked Controller

The DN4 is a networked access controller with large scale capabilities and mesh network architecture. Boasting intuitive Prescient UI and a modern, powerful microprocessor, each DN4 controls up to four doors and when networked with other DN4s can accommodate systems of up to 128 doors.

- ▶ Designed with installer-friendly focus for quick and easily scalable installation, setup time per-device reduces significantly with larger installations
- ▶ Intuitive Prescient UI allows seamless management of one or multiple sites from one computer, including networked DN4s, users, doors, anti-passback and alerts
- ▶ Modern mesh network architecture ensures robust operation; as long as at least one device on the mesh remains powered, overall system integrity is maintained

195mm x 107mm x 31mm

11.5 - 14.5V D.C. @ 1A

On-board CM4 computer

Industry standard connectors

NIDAC peripheral bus

No jumpers to configure reader devices

(Rev. 3 hardware shown)

Networked system optimised to manage 128 doors

Optimised for 50,000 users

Packaged with user friendly, browser based Prescient UI

Compatible with Prove peripherals

Each unit factory tested with 5 year warranty

Australian design, manufacture and support

PRESCIENT

User Interface

The Prescient UI is an intuitive, user friendly and powerful browser-based interface designed for easy, live access control management. The Prescient UI comes integrated with DN4 access controllers, allowing quick and seamless networking of devices for large-scale access control solutions.

- ▶ Browser-based design makes for quick and accessible setup and use, no independent app or program installation needed
- ▶ Main dashboard allows monitoring and responding to events, alerts and controller status in real-time
- ▶ Make and deploy system changes quickly and from any screen while operating

Simple to set up and use with tooltips and initial config wizard

Comes integrated with all DN4 access controllers

Anti-passback system configurable

Regular software/firmware updates

Powerful and highly configurable card data format engine

Australian design, development and support
